

OPERATING INSTRUCTIONS FOR HOT TUB

See the instructions overleaf from Naked Flame but please also note:

- **The tub is filled with fresh water and ready to light when you arrive**
- Make sure the hot tub is full of water (10cm from the top) before lighting the heater, it takes just over 1 hour to fill the tub to this level.
- Lighting the heater is simple and is the same principle as lighting a wood-burner.
- Completely fill the burner with wood (about half a binful) at first but once alight it should only need a few extra logs put on after 45 minutes or so.
- It takes around 2-3 hours to get up to temperature. Keep the lids on as much as possible while heating up the water.
- Please shower before getting into the tub, remove your make-up and not use any soaps or oils inside the hot tub.

- Please remember to wear the gloves provided if you touch the burner as it will be hot!
- Periodically check your burner so as not to let the fire go out completely and add logs as needed, however don't keep piling wood into the burner. As a guide you should only have to put a few logs onto the fire every 45-60 minutes to get the water to the right temperature.

- The water can get **very hot at the top** so stir water with paddle regularly
- The ideal temperature is 37-40°
- Children under 5 are prohibited from using the tub as high temperatures can affect little ones much quicker than adults. Older children can use the tub but must be accompanied by an adult at all times. If anyone using the tub begins to feel unwell, be sure to leave the tub.
- Anyone with medical conditions should check safety before using the tub.
- A drinks holder and plastic glasses are provided. No glass is permitted for safety reasons. We recommend drinking plenty of water whilst using the tub and avoid drinking alcohol.
- When you have finished using the tub, place the cover back on top. This protects the water from leaves and bugs. The insulating properties of the lid and tub also means that it should require a shorter heating time the following morning (following evening use).
- If you stick to the above instructions the water should last you for a weekend; if it is full of grass or looks murky then please change it, this will take a good 2-3 hours.
- Empty tub by turning the blue tap attached to the large hose - **only do this once the burner is completely cold otherwise irreparable damage can be done to the burner for which you will be liable.**

No need to refill the tub when you leave
